

## PERITONEAL CATHETERS IMPORTANT RISK INFORMATION

PERITONEAL DIALYSIS (I-SERIES, V-SERIES, X-SERIES)

**Indications for Use:** The Peritoneal Catheter is indicated for chronic peritoneal dialysis. The extended length of the "X" Series Catheter makes it especially applicable for peritoneal dialysis patients when it is necessary to locate the skin exit site remote from the usual lower abdominal region. The catheter may be particularly indicated in patients with obesity, floppy abdominal skin folds, urinary or fecal incontinence, chronic yeast intertrigo, intestinal stomas, or in patients who desire to take deep tub baths.

**Contraindications:** This catheter is contraindicated in patients who are not suitable candidates for peritoneal dialysis therapy. An upper chest (presteral) exit-site location of the X-Series Catheter may be contraindicated in patients who have had breast augmentation or breast reconstruction, or have a tracheostomy. However, this group of patients may be suitable candidates for an upper abdominal exit-site location of the X-Series Catheter.

Refer to Instructions for Use provided with the product for complete instructions, warnings, precautions, and contraindications. Observe all instructions for use prior to using products. Failure to do so may result in patient complications.
